

Clean Air Network

Clean Air for All 健康空氣 人人共享

### **Why are the Subdivided Unit Residents Disproportionately Burdened under Escalating Extreme Weather in Hong Kong?**

Clean Air Network continues to place emphasis on indoor air quality, as numerous scientific studies have indicated that long-term residence in spaces with substandard air quality in subdivided units can lead to physical and mental health issues, and local extreme weather events may further exacerbate the situation.

The government's "Task Force on Subdivided Units" is planning to set "Minimum Standards for Subdivided Unit Living Environment". CAN welcomes these measures and suggested that the related "standards" should encompass aspects including indoor air quality to ensure a hygienic living environment in our previous submission.

As extreme weather events become increasingly frequent and severe, the need for decisive government action to protect the well-being of subdivided unit residents has never been more urgent. Together, we can drive changes to build a healthier living environment in Hong Kong.

## [Upcoming] Workshop: Understanding Air Pollution and Disaster

Haze not only decreases visibility, but it can be a phenomenon caused by air pollution!

Co-organized by Hong Kong Red Cross and CAN, “Invisible Killer: Understanding Air Pollution and Disaster Workshop”, guides participants through experiments to understand the formation of haze and its health impacts.

Date: 28 August 2024 (Wednesday)

Time: 3:00pm - 4:00pm ; 4:00pm - 5:00pm (same content for both sessions)

Venue: Hong Kong Science Museum

Registration: First come, first served

Language: Cantonese

## [Recap] Workshop to Explore Air Quality Held in Sham Shui Po Community Living Room

CAN organized two sessions of workshop to explore air quality in the Sham Shui Po Community Living Room this month, allowing children to learn about air pollution and understand the air quality in the community through mini experiments and interactive games.

In the end, the children suggested various small actions to improve indoor and outdoor air quality in daily life!
