Community Dialogue Connected Stakeholders to Shape the Future of Indoor Air Management

To conclude our two-year Clean Air Neighborhood Project, we hosted our 'Community Dialogue: Creating Healthy Spaces for Everyone', bringing together community members and experts to discuss indoor air quality (IAQ) management.

Insights From Speakers

Fung Chin (Community Health Nurse, Health In Action)

- Highlighted the links between poor IAQ and health issues, especially for children and subdivided flat residents

Prof. Zhi Ning (Professor, HKUST Division of Environment and Sustainability)

- Advocated for continuous monitoring instead of short-term assessments

Annie Li (Campaign Manager, CAN)

- Introduced the legal frameworks in France, Korea and Taiwan on IAQ monitoring and improvement

Highlights from the World Café

- Users of our previous IAQ programme shared first-hand experiences
- Participants designed their own monitoring systems
- Participants discussed the way forward for IAQ management

Dr. Ning Fan, the founder of Health In Action, emphasized that all sectors of society must contribute to IAQ management in his concluding remarks.

Special thanks to our speakers and participants for their support. CAN appreciated the opportunity to understand the views of the community, which have informed our work to promote IAQ in Hong Kong.

Inspiring the Next Generation: Clean Air Education Assembly at Harrow International School

We led a Clean Air Education Assembly for nearly 500 students from Years 1 to 5 at Harrow International School Hong Kong. We were amazed that even four-year-old participants demonstrated a remarkable understanding of air pollution. Their natural grasp of environmental impacts reinforced that environmental education knows no age limits.

Special thanks to Harrow International School and Friends of Harrow (PTA) for this opportunity. By nurturing young minds with clean air awareness and environmental education, we are cultivating a generation that understands its role in ensuring a healthier future.

AmCham Member Survey: Air Quality Still a Negative Business Factor in Hong Kong

In AmCham's business sentiment survey 2025, 16% of the responding members reported considering air quality to be a negative business factor in Hong Kong, compared with 24% in 2024. Air quality in Hong Kong indeed improved in 2024. However, air pollution still exceeded World Health Organization thresholds by far and was estimated to cause 3,500 premature deaths in Hong Kong last year.

Please see our annual air quality review for details.
